Introduction to The Tor Ecosystem

Privacy, Anonymity, and Anti-censorship

Alexander Færøy

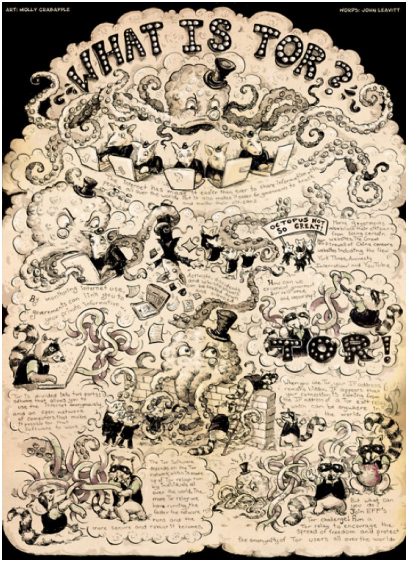
August 11, 2019

About Me

- Core Developer at The Tor Project since February 2017.
- Free Software developer since 2006.
- Worked with distributed systems in the Erlang programming language, mobile web browsers, consulting, and firmware development.
- Co-organizing BornHack together with a bunch of wonderful people.

What is Tor?

- Online anonymity and censorship circumvention.
  - Free software.
  - Open network.
- Community of researchers, developers, users, and relay operators.
- U.S. 501(c)(3) non-profit organization.



History

1990s	Onion routing for privacy online.
Early 2000s	Working with the U.S. Naval Research Laboratory.
2004	Sponsorship by the Electronic Frontier Foundation.
2006	The Tor Project, Inc. became a non-profit.
2007	Expansion to anti-censorship.
2008	Tor Browser development.
2010	The Arab spring.
2013	The summer of Snowden.
2018	Dedicated anti-censorship team created.

Somewhere between 2,000,000 and 8,000,000 daily users.

Threat Model

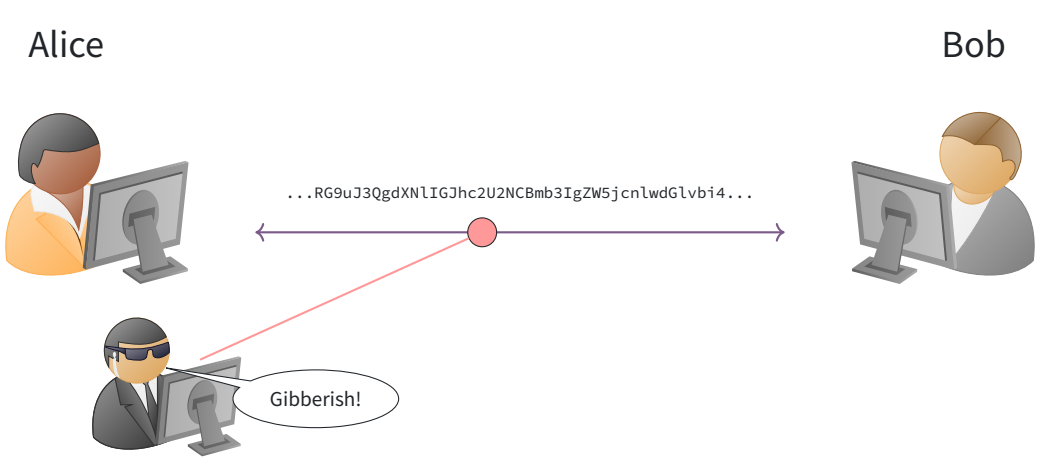
Anonymity isn’t Encryption



Encryption just protects contents.

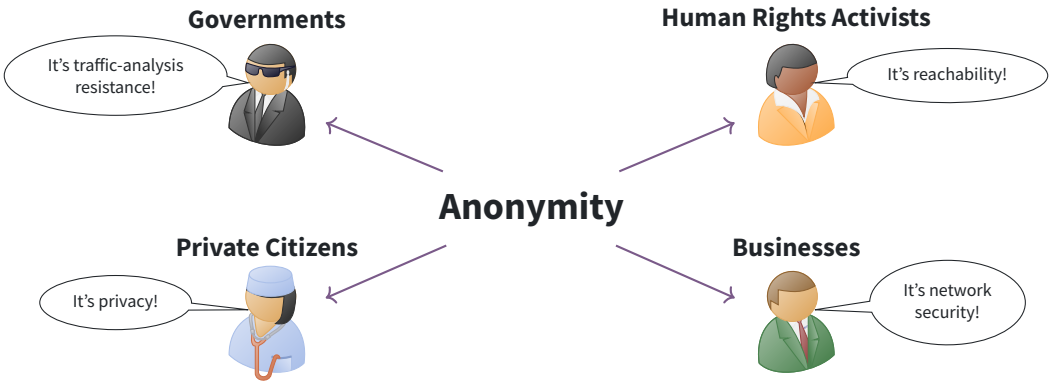
Metadata

The Data About Data

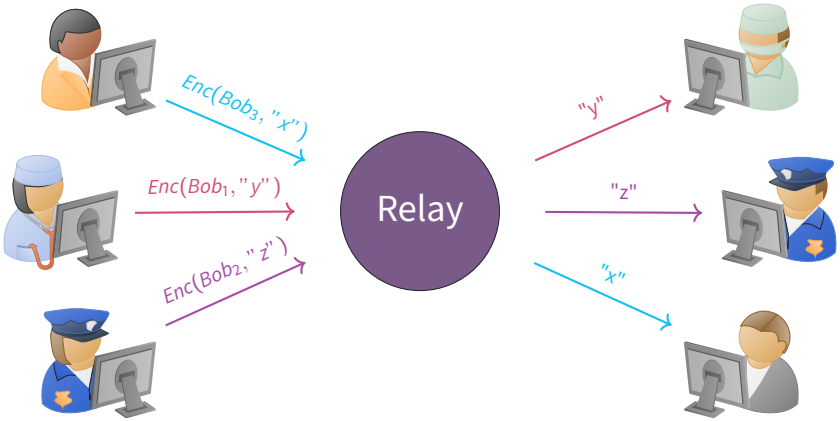
"We Kill People Based on Metadata."

—Michael Hayden, former director of the NSA.

Different Purposes of Anonymity

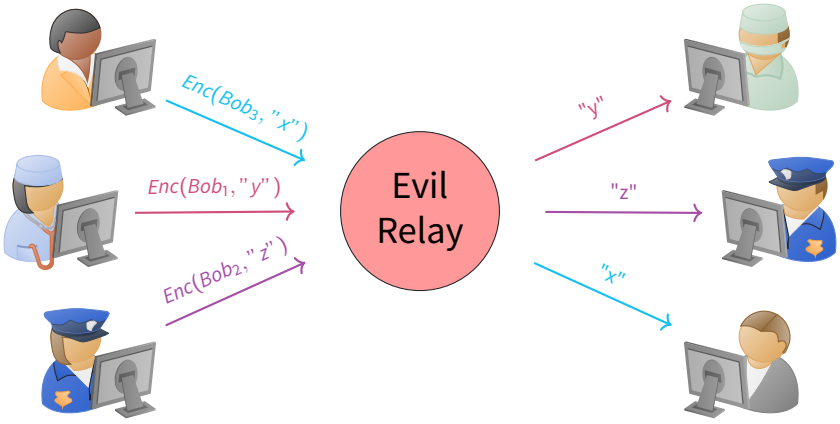


A Simple Design

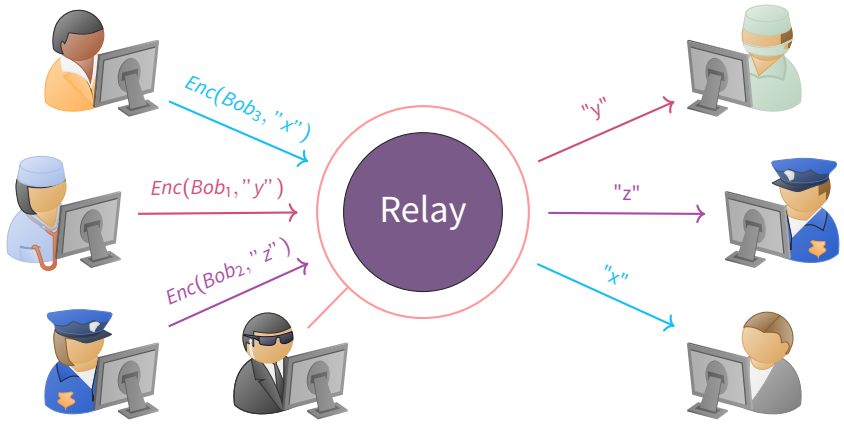


Equivalent to some commercial proxy providers.

A Simple Design

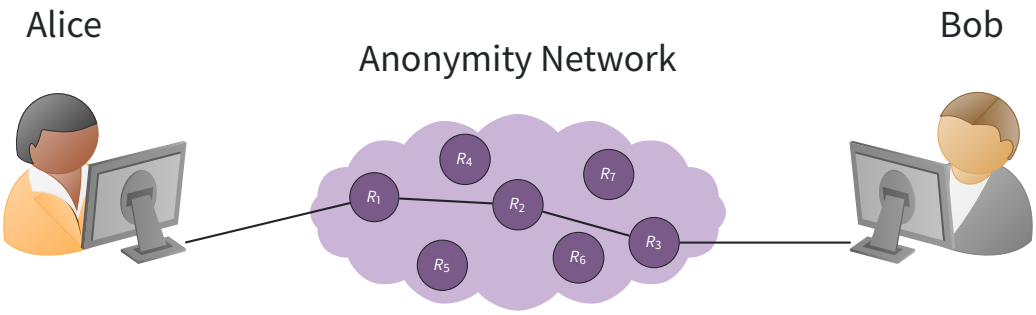


A Simple Design



Timing analysis bridges all connections going through the relay.

The Tor Design



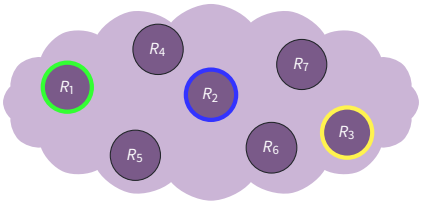
Add multiple relays so that no single relay can betray Alice.

The Tor Design

Alice

Anonymity Network

Bob



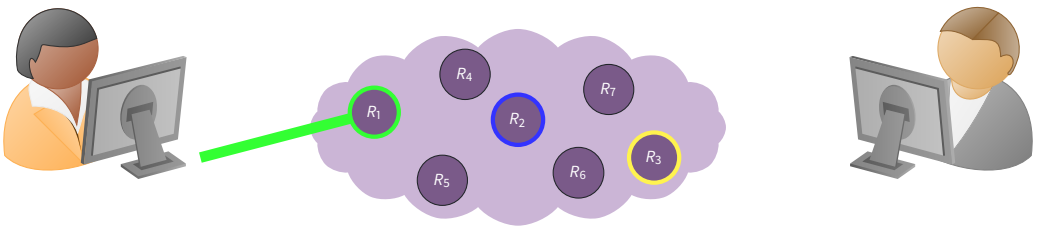
Alice picks a path through the network: R_1, R_2, and R_3 before finally reaching Bob.

The Tor Design

Alice

Anonymity Network

Bob



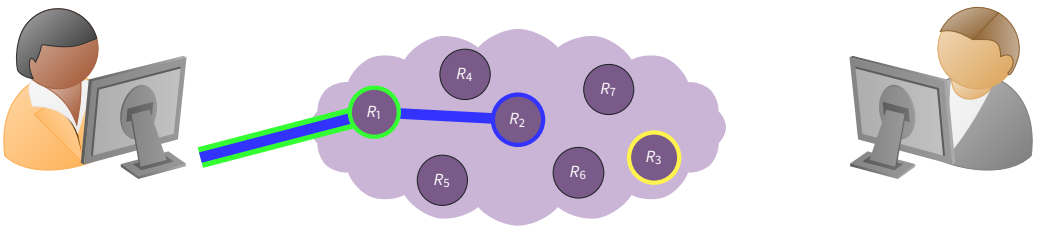
Alice makes a session key with R_1.

The Tor Design

Alice

Anonymity Network

Bob



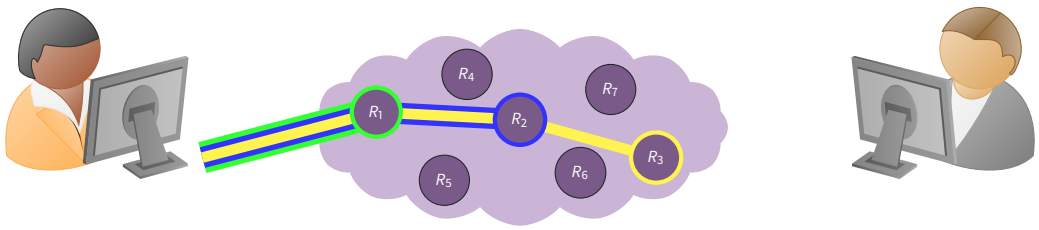
Alice asks R_1 to extend to R_2.

The Tor Design

Alice

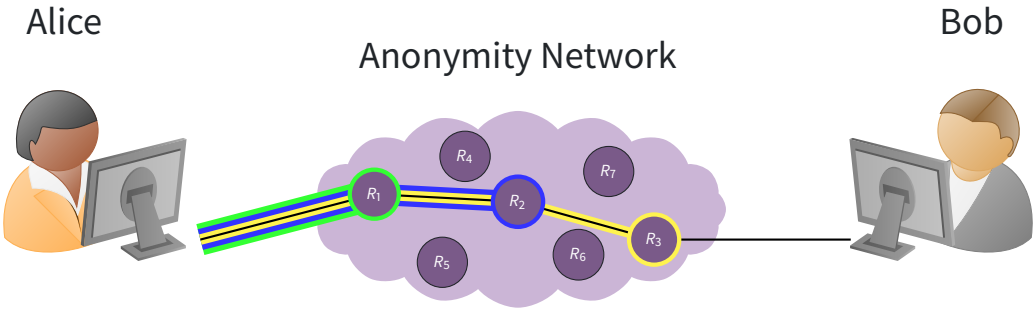
Anonymity Network

Bob



Alice asks R_2 to extend to R_3.

The Tor Design



Alice finally asks R_3 to connect to Bob.

The Tor Network

- An open network – everybody can join!
- Between 6000 and 7000 relay nodes.
- Kindly hosted by various individuals, companies, and non-profit organisations.
- 9 Directory Authority nodes and 1 Bridge Authority node.
- What is the IPv6 story?

The Tor Network

The Tor Network

Tor's **safety** comes from **diversity**:

1. Diversity of relays. The more relays we have and the more diverse they are, the fewer attackers are in a position to do traffic confirmation.
   Research problem: How do we measure diversity over time?
2. Diversity of users and reasons to use it. 50000 users in Iran means almost all of them are normal citizens.

I'm a political activist, part of a semi-criminalized minority. In my younger years I entered the public debate openly, and as a result got harassed by government agencies. I later tried to obfuscate my identity, but I found that my government has surprisingly broad powers to track down dissidents.

Only by using anonymizing means, among which Tor is key, can I get my message out without having police come to "check my papers" in the middle of the night. **Tor allows me freedom to publish my message to the world without being personally persecuted for it.**

Being a dissident is hard enough, privacy is already heavily curtailed, so anonymized communication is a godsend.

—Anonymous Tor User.

I'm a doctor in a very political town. I have patients who work on legislation that can mean billions of dollars to major telecom, social media, and search concerns.

When I have to do research on diseases and treatment or look into aspects of my patients' histories, I am well aware that my search histories might be correlated to patient visits and leak information about their health, families, and personal lives. **I use Tor to do much of my research when I think there is a risk of correlating it to patient visits.**

—Anonymous Tor User.

The Implementation of Tor

- The reference Tor implementation is written in the C programming language.
- Ongoing experiments with Mozilla's Rust programming language.
- Follow best practices: high coverage for tests, integration tests, coverity, static code analysis, and code review policies.
- Specification and discussion before implementation. Specifications can be found at gitweb.torproject.org/torspec.

A round of applause to the Tor project

Andrey Karpov
Articles: 368

May 12, 2017

My congratulations to the authors of the Tor project. I didn't manage to find any errors after the analysis by PVS-Studio static code analyzer. We write such words very rarely, so the authors may really be proud. They do deserve a medal for the high-quality code.

Onion Services

- Allows servers to be anonymous.
- The “.onion” Special-Use Domain Name (RFC 7686).
- Introduced in Tor version 0.0.6pre1 from April, 2004.
- Traffic stays within the Tor network: No need to exit the network.
- Onion addresses are either 16 characters long (for version 2) or 52 characters long (for version 3).
  Research problem: How do we handle these long addresses?

1 Million People use Facebook over Tor

FACEBOOK OVER TOR · FRIDAY, APRIL 22, 2016

People who choose to communicate over Tor do so for a variety of reasons related to privacy, security and safety. As we've written previously it's important to us to provide methods for people to use our services securely – particularly if they lack reliable methods to do so.

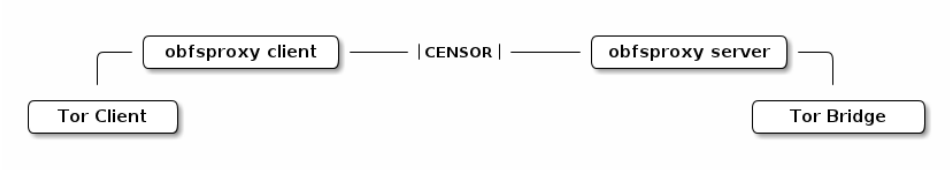
Anti-censorship Strategies

- Censors will apply censorship to nodes in the network.
- Same for known bridges.
- Solution: either make it hard to analyze the traffic or make it hard to block the bridges.

Pluggable Transports



Obfourscator (obfs4)

- Does full x25519 handshakes, but uses Elligator2 to map elliptic curve points.
- Allows you to tune timers for traffic.

Meek

- Connect with TLS with SNI set to some large user of the cloud provider.
- Inside your TLS connection you do a normal HTTP request, but with the Host header set to the server you want to reach inside the cloud.
- Efficient, but expensive :-(

Domain Fronting

- Using ESNI?
- Using various cloud providers message queue services?
- Generally using large centralized services to give access to censored people.

Tor is not foolproof

- Operational security mistakes.
- Browser metadata fingerprinting.
- Browser exploits.
- Traffic analysis.

How can you help?

- Run a Tor relay or a bridge!
- Teach others about Tor and privacy in general.
- Find, and maybe fix, bugs in Tor.
- Test Tor on your platform of choice.
- Work on some of the many open research projects.
- Donate at donate.torproject.org
